

## Between 6th and 12th Birthday

 A black and white line drawing showing a group of children in an outdoor setting. In the foreground, a girl is walking towards the viewer, holding a ball. In the background, other children are walking on a path and climbing a set of stairs.	<p><b>GMFCS Level I</b></p> <p>Children walk indoors and outdoors, and climb stairs without limitations. Children perform gross motor skills including running and jumping but speed, balance, and coordination are reduced.</p>
 A black and white line drawing showing a child walking up a set of stairs. The child is holding onto a railing with one hand. Another child is walking on the path leading up to the stairs.	<p><b>GMFCS Level II</b></p> <p>Children walk indoors and outdoors, and climb stairs holding onto a railing but experience limitations walking on uneven surfaces and inclines, and walking in crowds or confined spaces. Children have at best only minimal ability to perform gross motor skills such as running and jumping.</p>
 A black and white line drawing showing three children using different types of assistive mobility devices. One child is using a forearm crutch, another is using a walker, and a third is sitting in a wheelchair.	<p><b>GMFCS Level III</b></p> <p>Children walk indoors or outdoors on a level surface with an assistive mobility device. Children may climb stairs holding onto a railing. Depending on upper limb function, children propel a wheelchair manually or are transported when travelling for long distances or outdoors on uneven terrain.</p>
 A black and white line drawing showing two children using different types of assistive mobility devices. One child is using a walker, and the other is sitting in a power wheelchair.	<p><b>GMFCS Level IV</b></p> <p>Children may maintain levels of function achieved before age 6 or rely more on wheeled mobility at home, school, and in the community. Children may achieve self-mobility using a power wheelchair.</p>
 A black and white line drawing showing a child being transported in a wheelchair. An adult is pushing the wheelchair. Another child is sitting in a wheelchair in the foreground, looking down.	<p><b>GMFCS Level V</b></p> <p>Physical impairments restrict voluntary control of movement and the ability to maintain antigravity head and trunk postures. All areas of motor function are limited. Functional limitations in sitting and standing are not fully compensated for through the use of adaptive equipment and assistive technology. At level V, children have no means of independent mobility and are transported. Some children achieve self-mobility using a power wheelchair with extensive adaptations.</p>
